

Colocation of national e-infrastructure for high performance computing and storage

Roger Kvam
Senior Project Manager

 sigma2

Who we are - and what we do

Sigma2 has strategic responsibility for and manages the national e-infrastructure for large-scale data- and computational science in Norway.

Sigma2 collaborates with the Universities in Bergen, Oslo, Tromsø, and Trondheim to provide the Norwegian research infrastructure services (NRIS).

Our data center locations

2018

 **UiT Norges arktiske universitet**

Stallo
Fram

Vilje

 **NTNU**

 **UNIVERSITETET I BERGEN**

Hexagon

 **UNIVERSITETET I OSLO**

Abel

Our data center locations

2023

 **UiT Norges arktiske universitet**

- Fram HPC
- NIRD data storage (old)

Finland

 City of **Kajaani**

- LUMI

 **NTNU**

- Betzy HPC
- Saga HPC
- NIRD data storage (old)

 **LEFDAL MINE DATACENTER**

- NIRD
- Next generation HPC (2024)

 **UNIVERSITETET I OSLO**

- TSD (services for sensitive data)

Our data center locations

 NRIS

BETZY

Das ist der Beta-Test. Wir haben
100-1000 Personen Technologie für die Nutzung der
Clouds. Aber wir sind immer noch in der Anfangsphase
des Prozents.

Im Zusammenhang mit dem Cloud-Service
ist es ein Prozess, der sich über
die Zeit entwickelt. Es ist ein Prozess, der
sich über die Zeit entwickelt. Es ist ein Prozess,
der sich über die Zeit entwickelt. Es ist ein Prozess,
der sich über die Zeit entwickelt.

Traditional server-rack (air cooled)
5-30 KW pr rack

Direct liquid HPC rack
50-150 KW pr rack

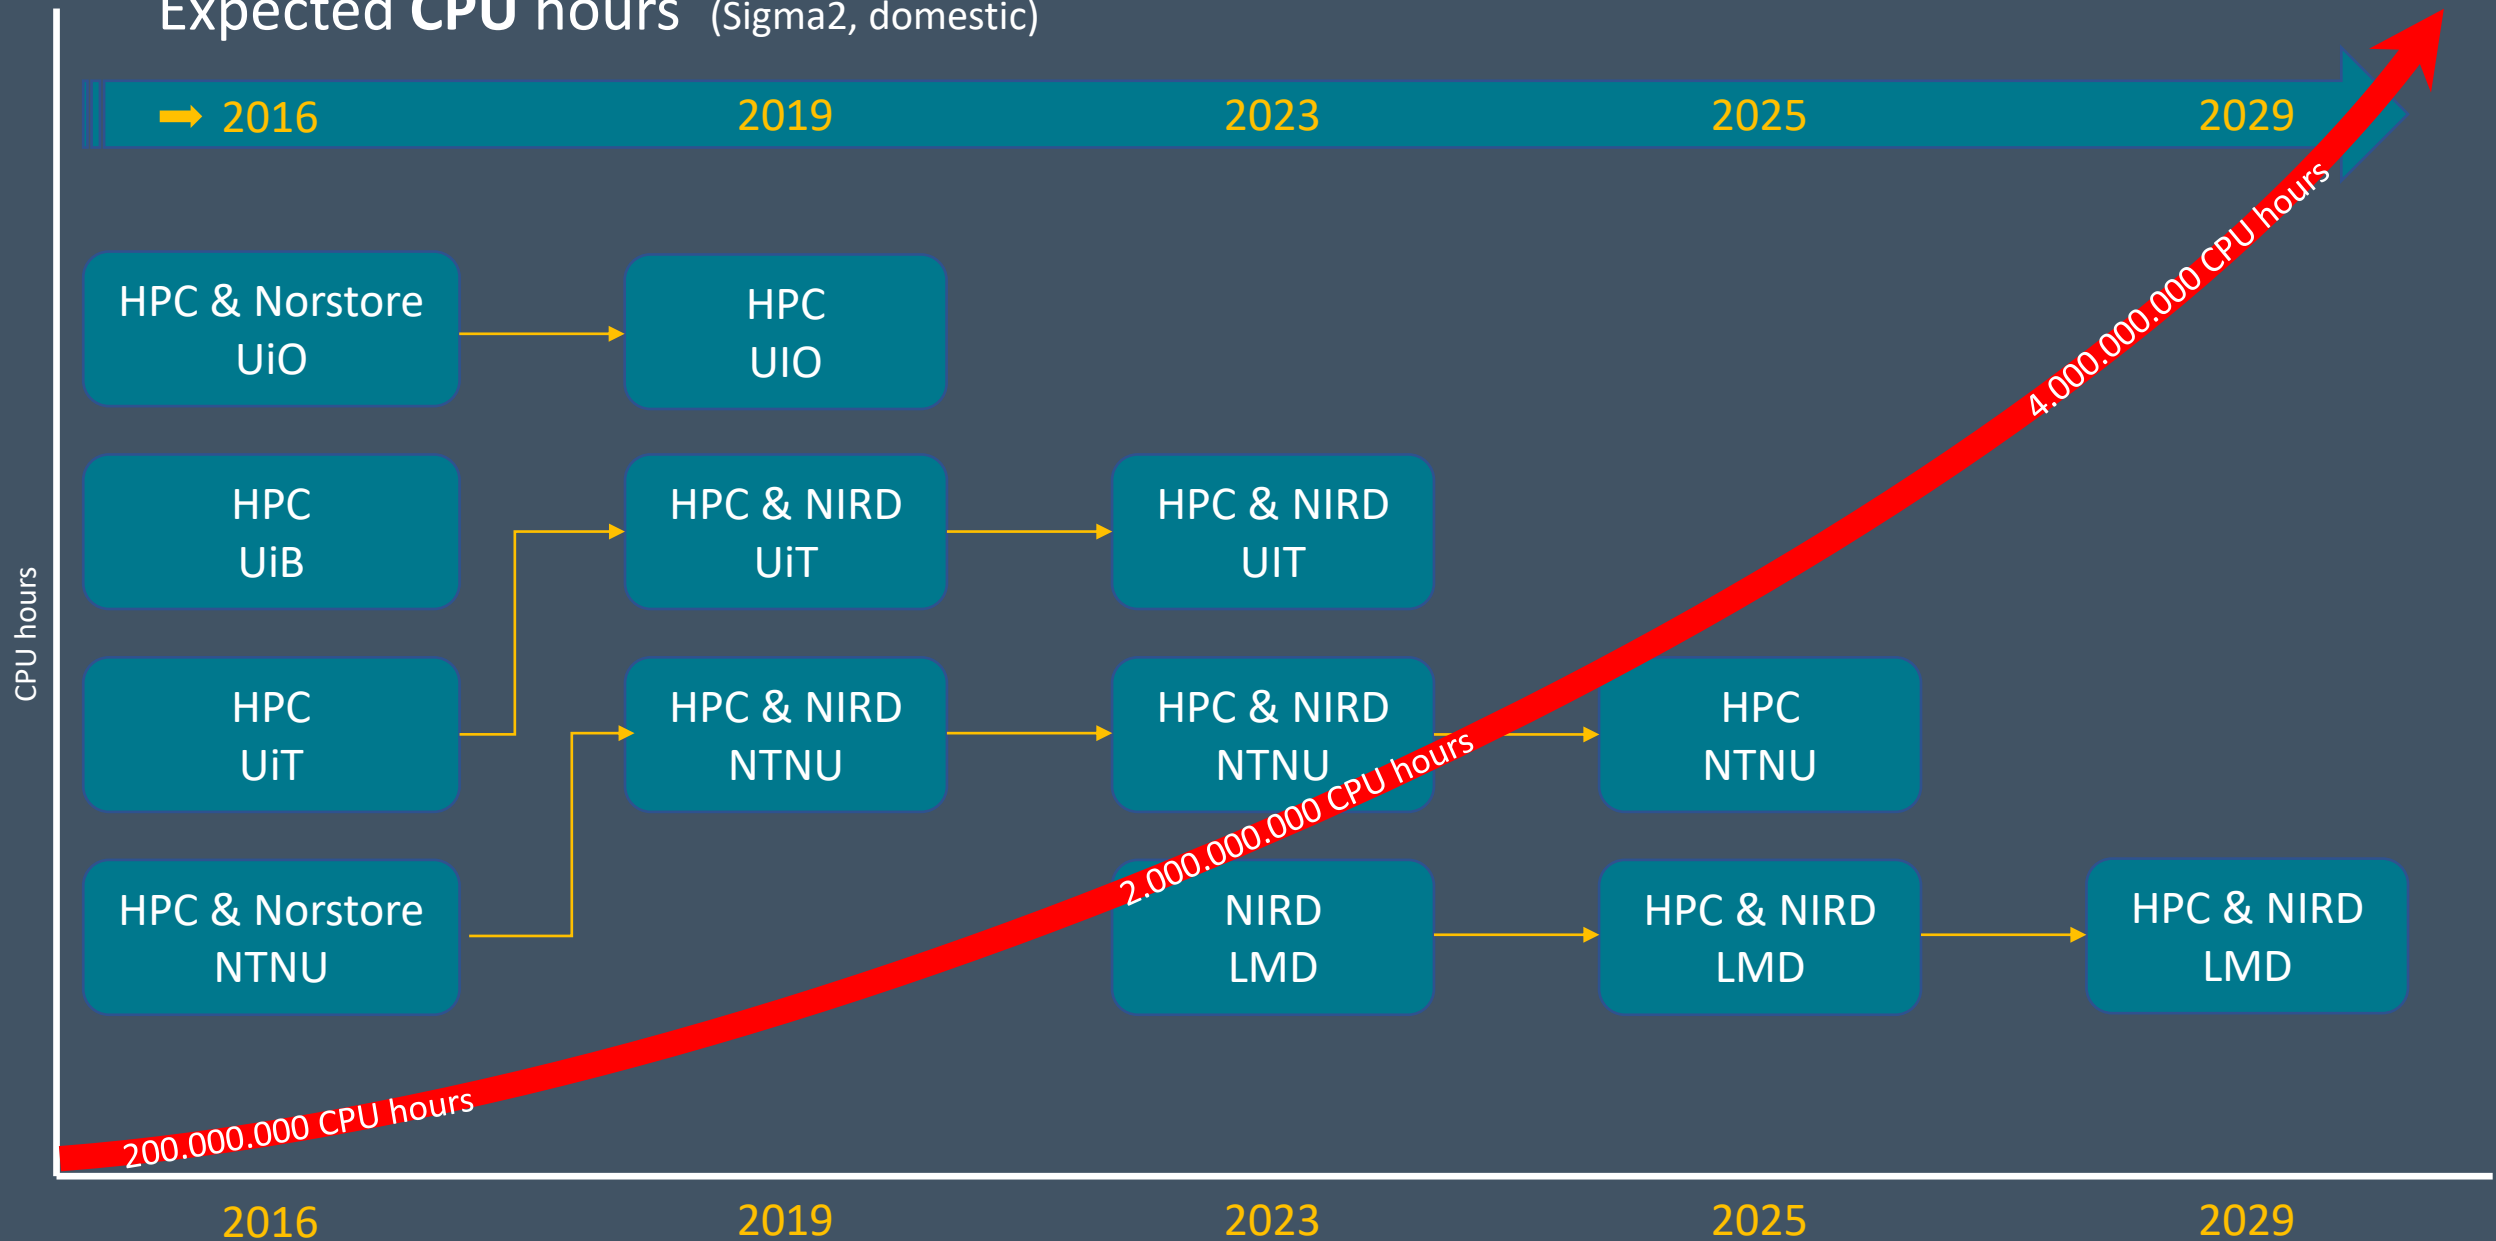

Direct liquid Pre-exascale/exascale HPC rack
150-500 KW pr rack

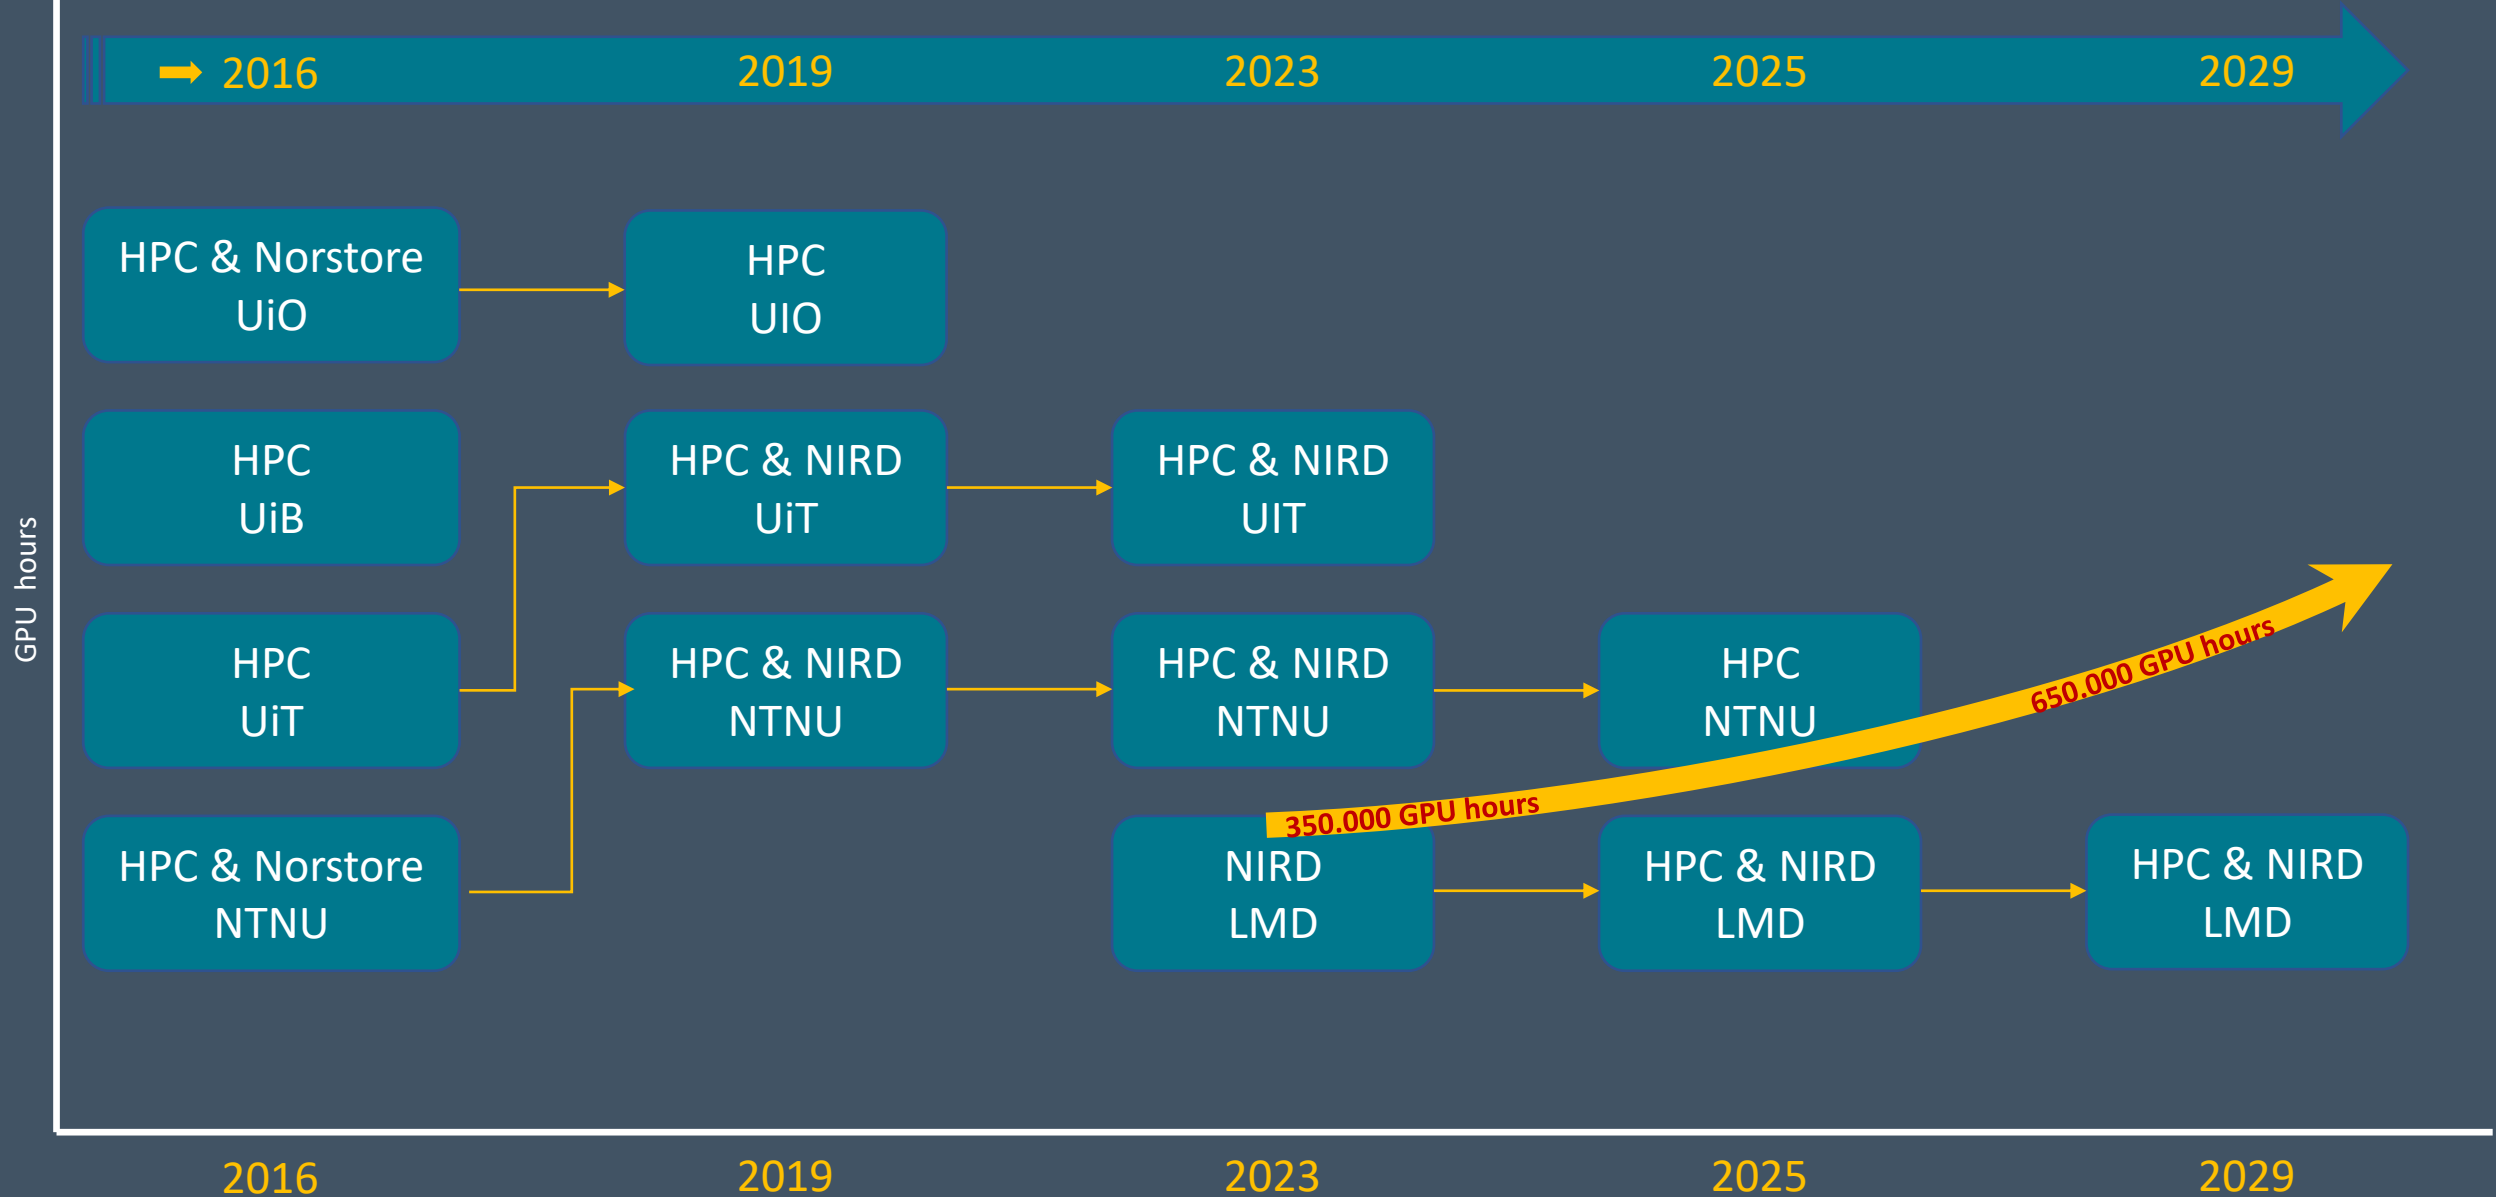

Raised floor for high density HPC must now be ready for 3 tons pr. square meter

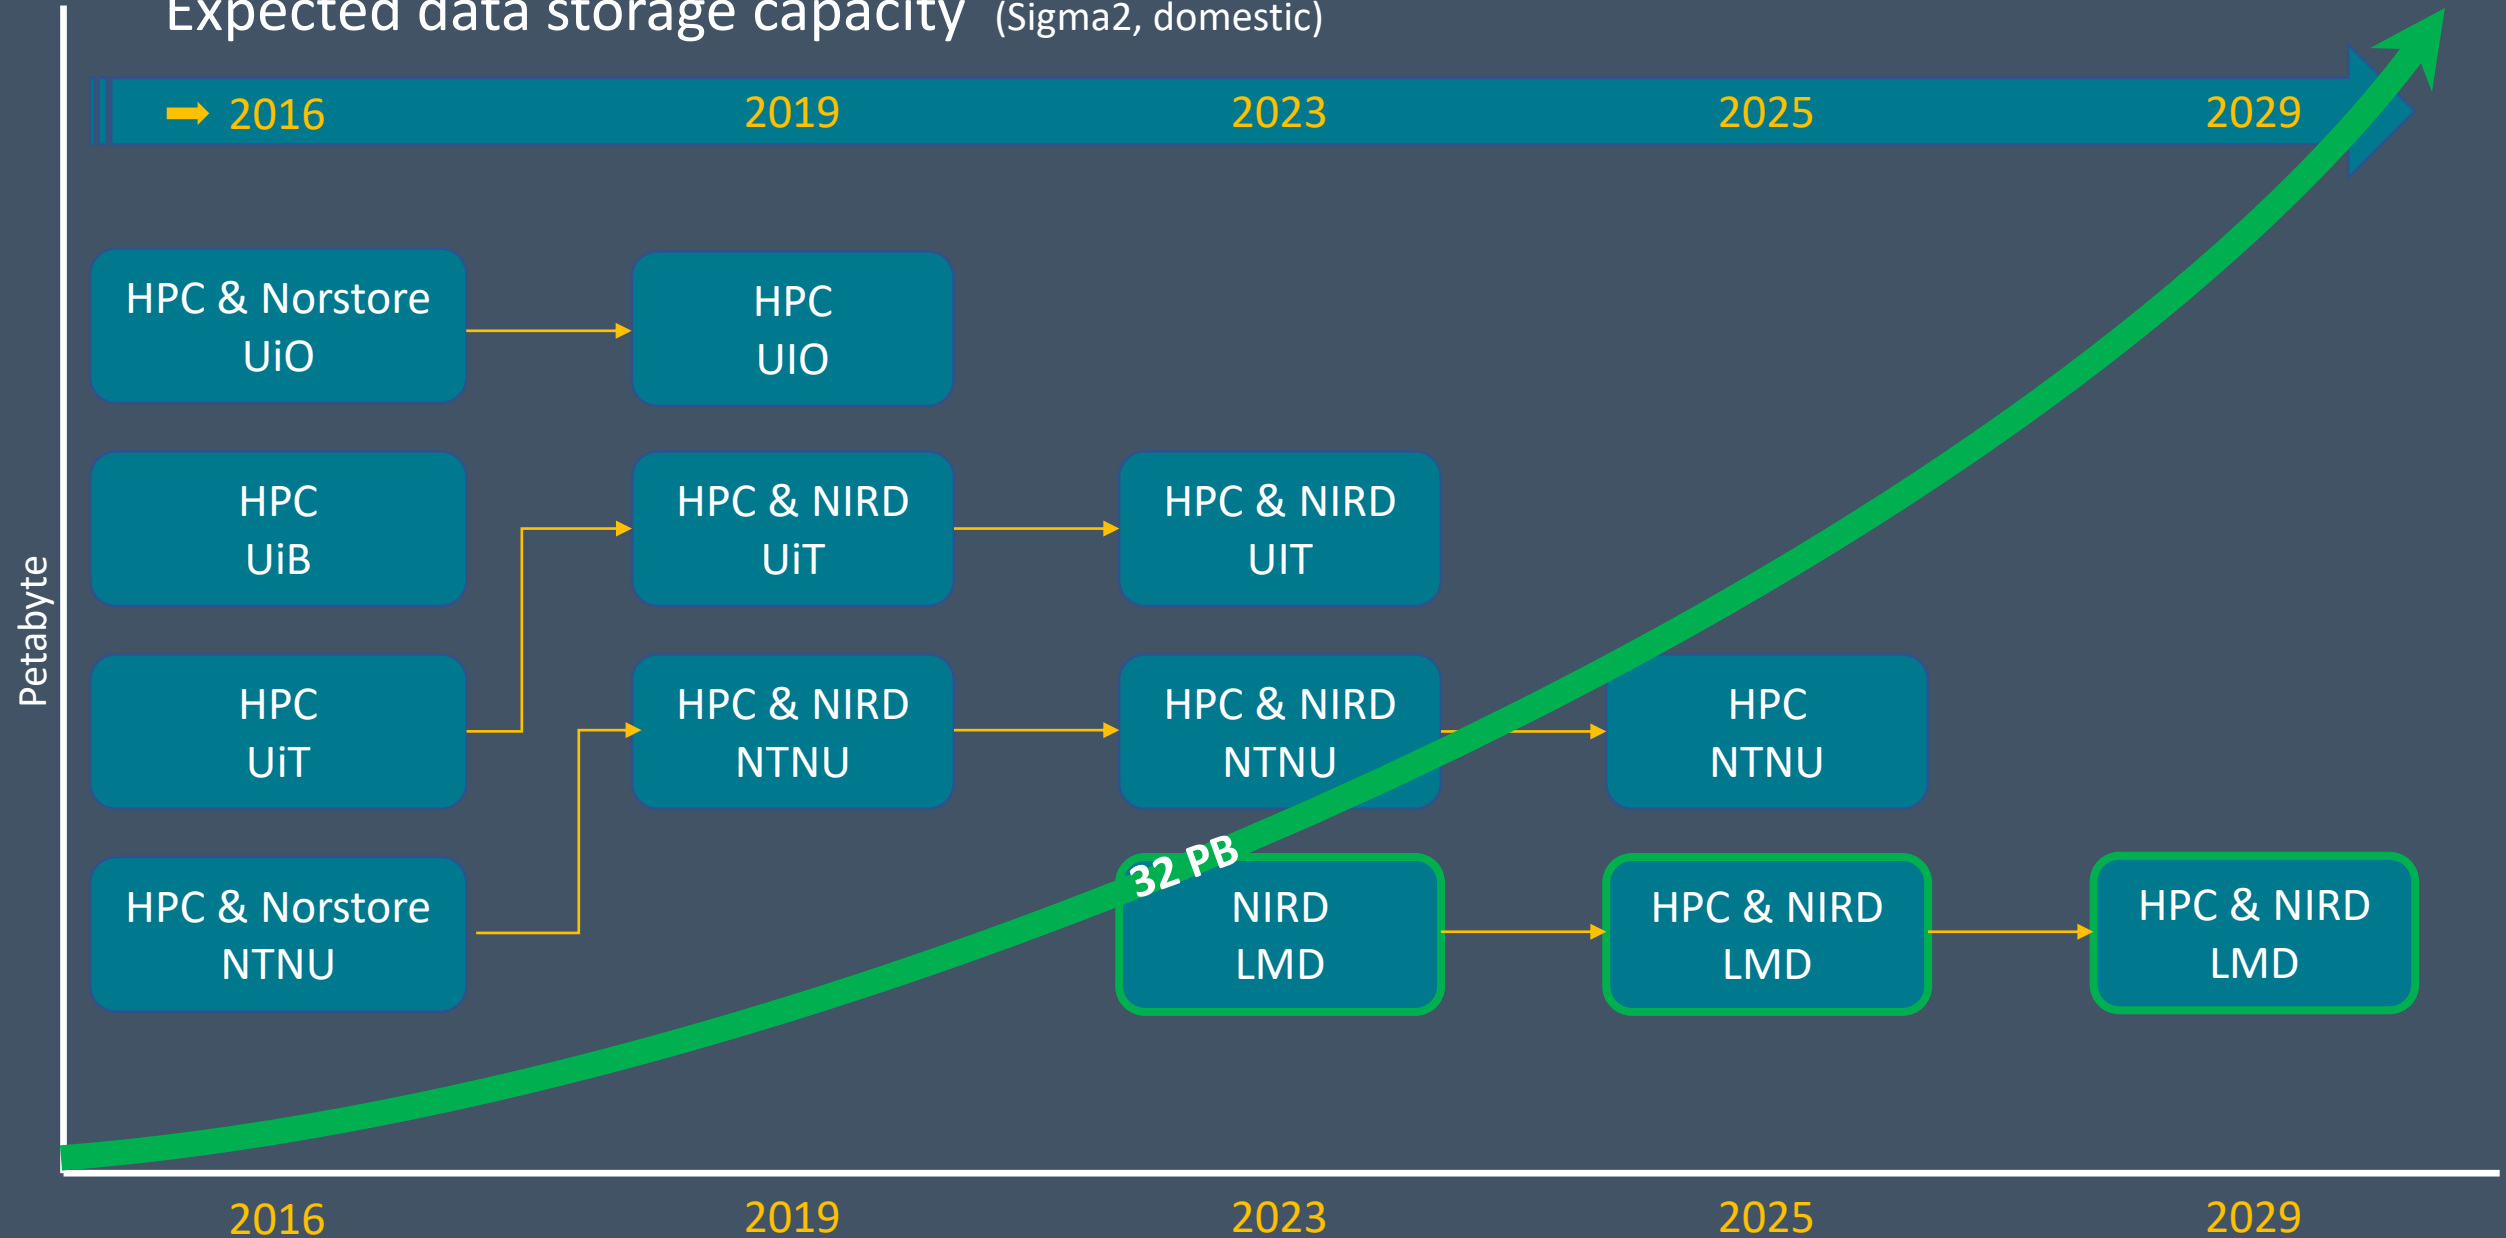

Expected CPU hours (Sigma2, domestic)

Expected GPU hours (Sigma2, domestic)

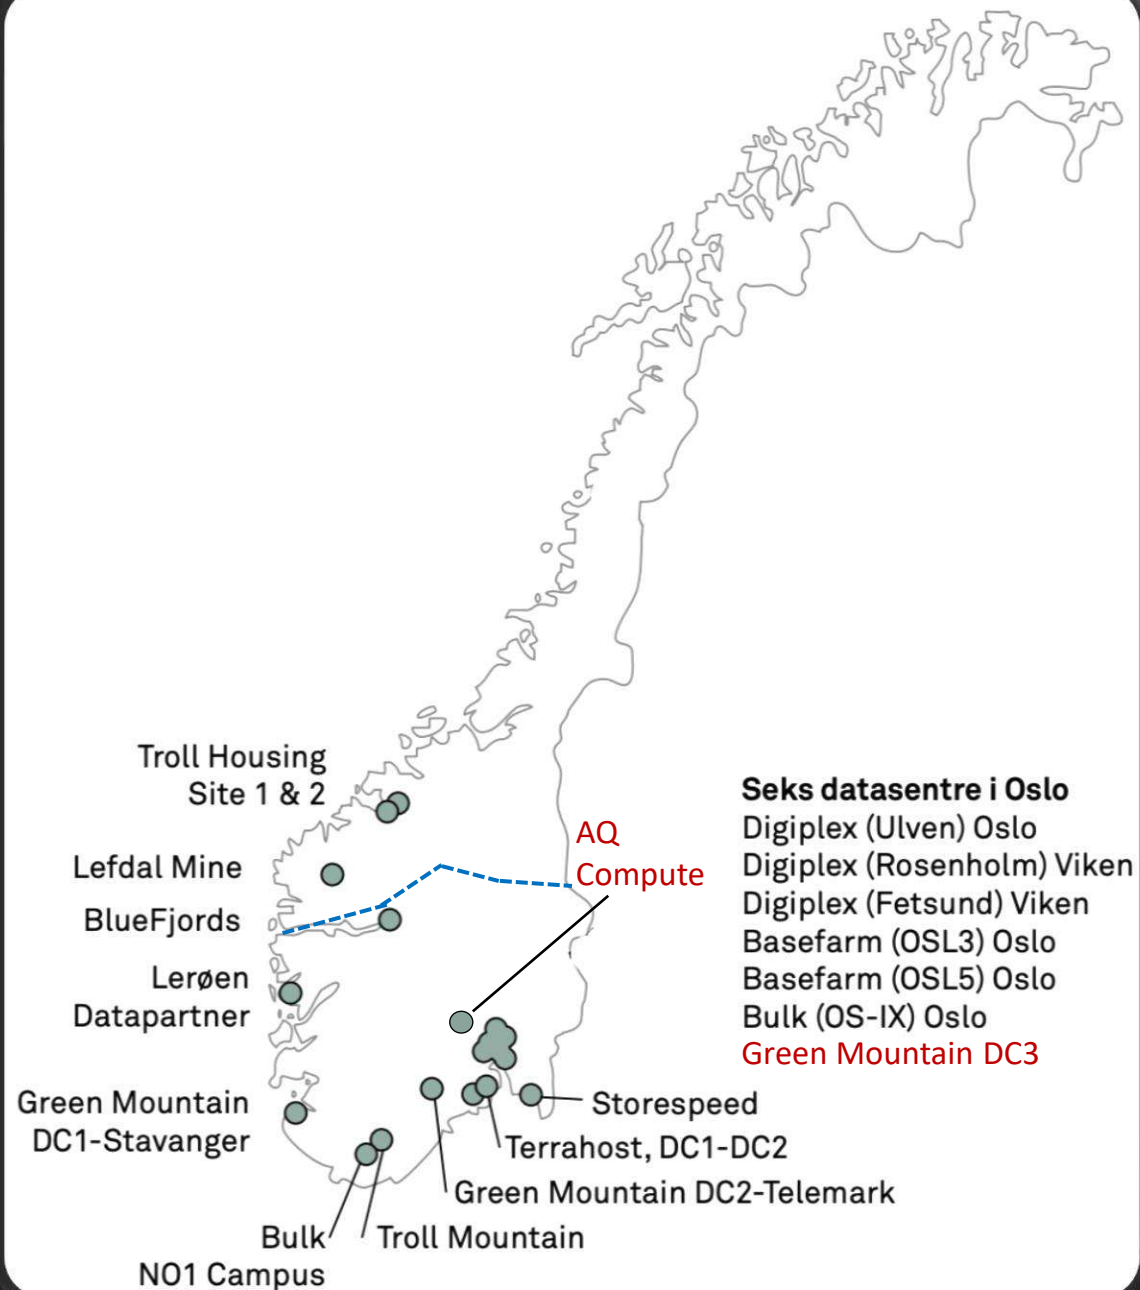

Expected data storage capacity (Sigma2, domestic)

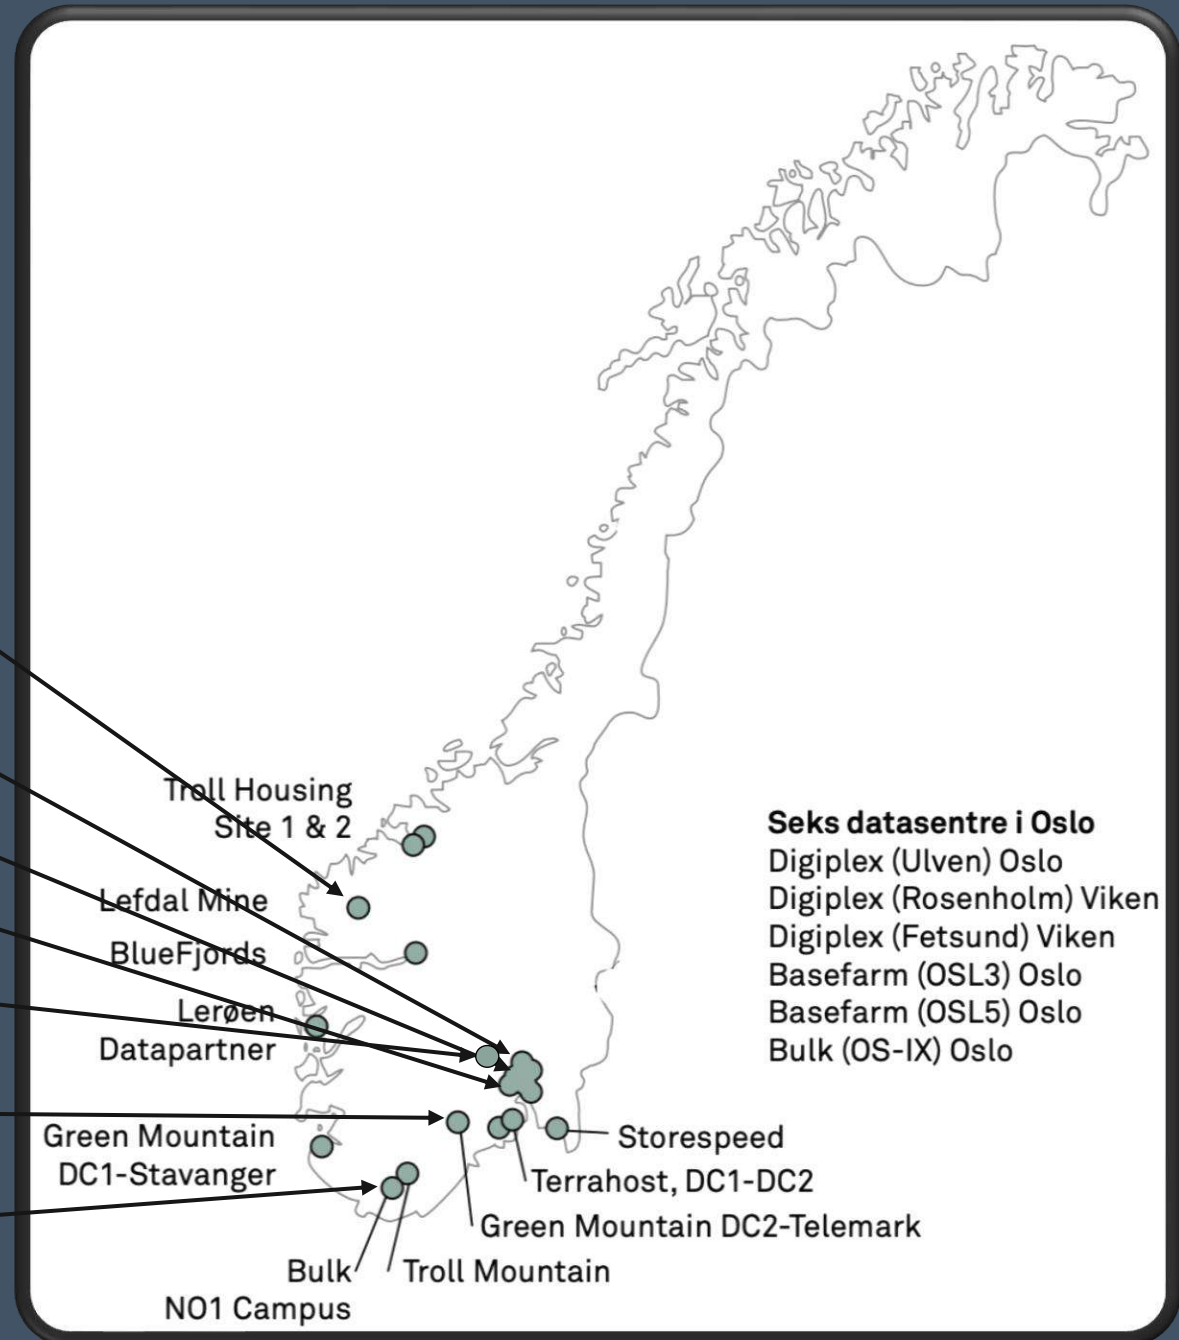

DATASENTRE I NORGE

Ringvirkningsanalyse av gjennomførte
og potensielle etableringer

Kommunal- og
distriktsdepartementet

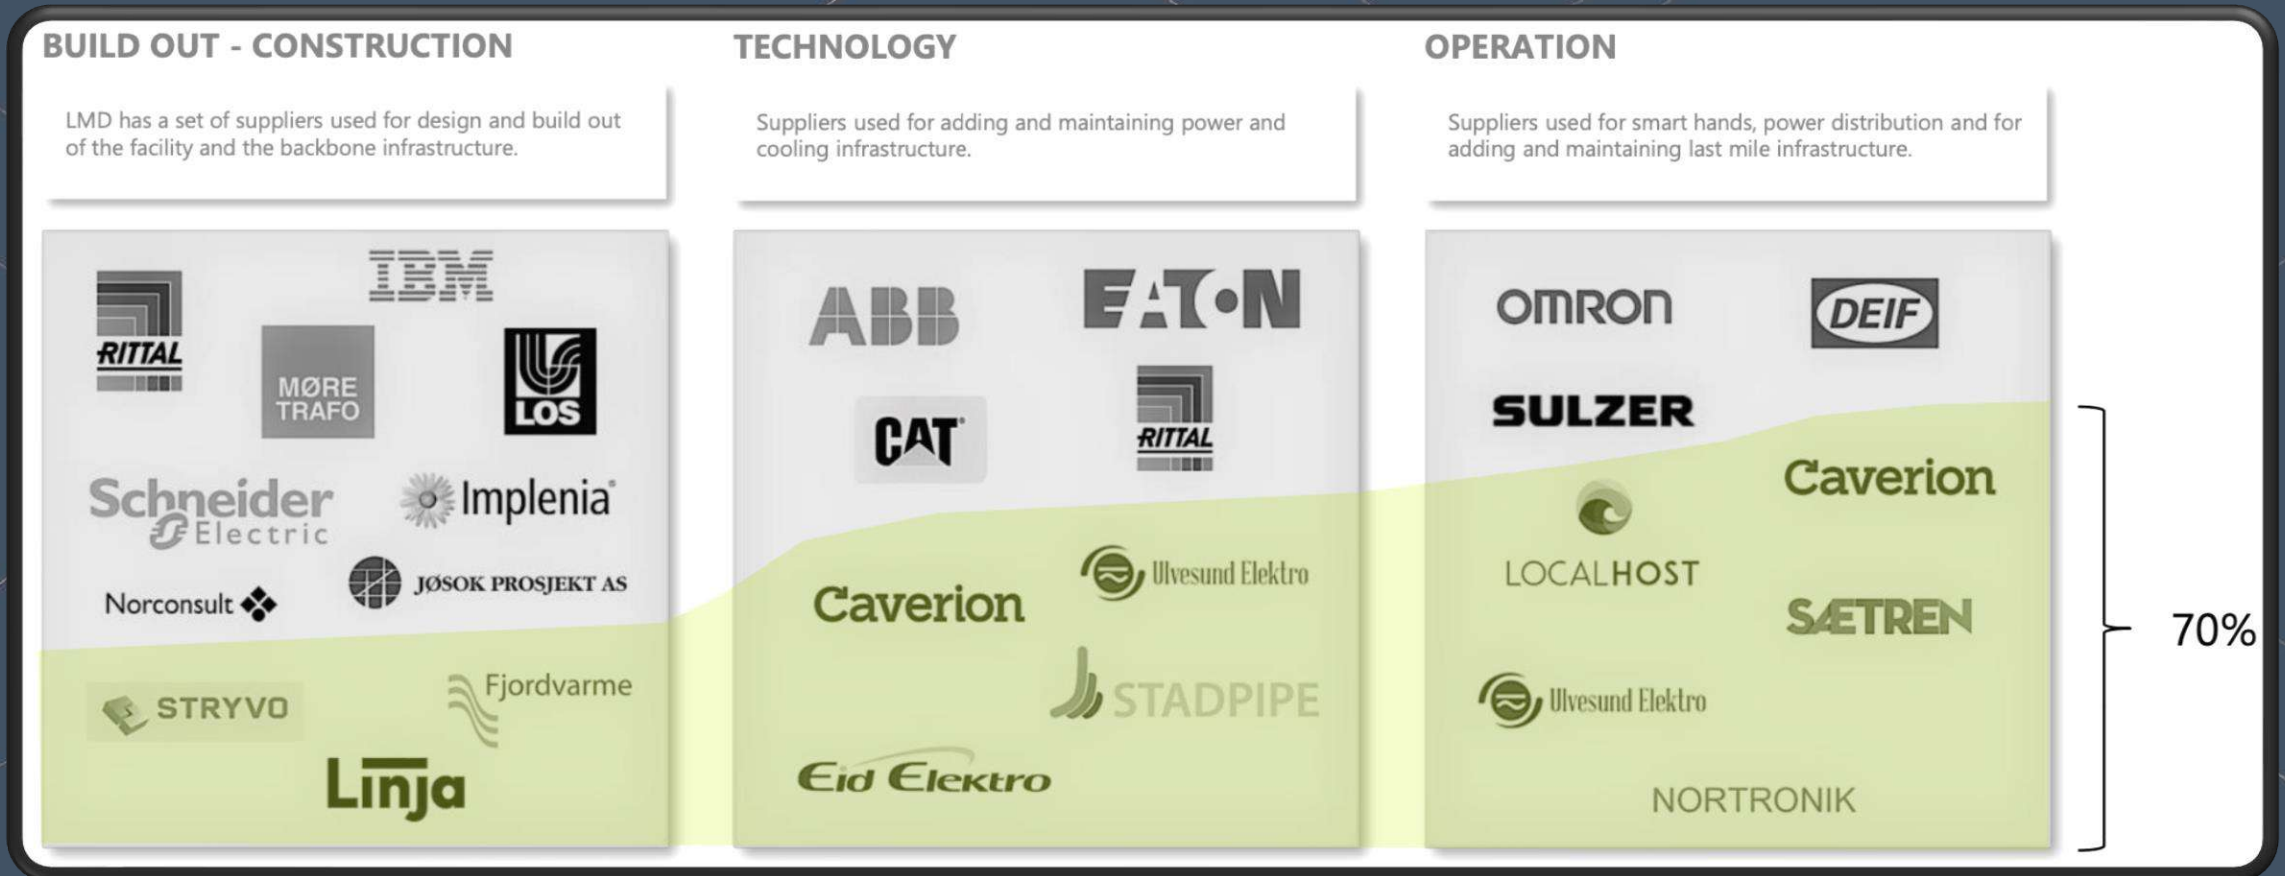

Participants in the competition

Vendor selection criteria

70% of infrastructure suppliers involved at Lefdal Mine Datacenter are local

Why Lefdal Mine Datacenter ?

- Infinite ... and predictable scalability in terms of area, electrical power and cooling. This also contributes to increased cost control.
- Highest level of physical security, 700 meters inside the mountain, behind several security gates.
- Reuse of excess heat for fish farming (2024).
- Excellent separation between colocation customers inside the mine. Each customer can establish an increased adapted level of physical security around their own area.
- Containers for the NIRD installations mean adapted physical security, but also a short distance between the containers and the HPC hall gives significant synergies for rapid data transfer.

Other synergies when colocation HPC and data storage

- Improved user experience
 - Easy data staging, even seamless
 - Low latency, high-speed connections in all directions

Remote HPC and data storage management by

Sigma2 and the universities in Bergen, Oslo, Tromsø, and NTNU (NRIS) collaborate on providing the Norwegian research infrastructure services

- NIRD
- Next generation HPC

Inside NIRD Tiered Storage container

Safe hardware maintenance with use of AR technology

Hololens (AR - augmented reality) is a very useful addon tool for Smarthands onsite the datacenter and remote experts from Sigma2/NRIS and hardware suppliers

- MS Teams client / Remote Assist app
- Sharing of presentations, how-to's, service manuals
- OneDrive access for shared info
- Connected through eduroam WiFi with excellent quality and stability
- Reduces risk of misunderstandings between experts and Smarthands
